GENERAL DIRTY APPEARANCE

History

During restocking, an employee over stocks a shelf and it falls onto him. The team finds the casualty under a metal stack with assorted books and boxes around the area. The casualty is conscious and complaining about his ankle and wrist.

When or as the team removes the shelving unit from the casualty, the casualty yells in pain as a metal object is removed from their abdomen (as it was attached to the self being moved).

About five minutes into the accident, the lighting to the floor is cut and someone on a public address system advises the floor that the stormy weather has apparently cut electricity to their building and that the fire department and electrical company had been notified. Power will be restored as soon as possible.

Power is restored during the last five minutes of the problem.

Judging Notes:

- Assist team with prompting if casualty does not respond properly.
- Please check the casualties' positions and all simulation.
- Judges to attempt not to assist teams by sharing their lights with them.
Teams must survive on their own.
